premium was paid by the state. State Medicaid programs can pay Medicare premiums

for certain dual eligibles (i.e., for beneficiaries also enrolled in a state Medicaid

program); this action is called "buying in" and so this variable is the "buy-in code." Any month where the BUYINXX variable was: A (Part A state buy-in), B (Part B state buy-in),

#### CNTY\_CD

**DESCRIPTION:** This code specifies the Social Security Administration (SSA) code for the county of

identified through the beneficiary mailing address of the beneficiary.

**SHORT NAME:** CNTY\_CD

LONG NAME: COUNTY\_CD

TYPE: CHAR

**LENGTH:** 3

**SOURCE:** CMS Common Medicare Environment (CME)

VALUES: -

**COMMENT:** Each state has a series of codes beginning with '000' for each county within that state.

Certain cities within that state have their own code. County codes must be combined with state codes in order to locate the specific county. The coding system is the SSA system, not the Federal Information Processing Standard (FIPS). In some cases, the code may not be the actual county where the beneficiary resides. CMS obtains the mailing address used for cash benefits or the mailing address used for other purposes (for example, premium billing) from Social Security Administration (SSA) and Railroad

Retirement Board (RRB) Beneficiary Record Systems.

Administration (SSA) and Railroad Retirement Board (RRB) record systems.

#### CRNT\_BIC

LABEL: Current Beneficiary Identification Code

**DESCRIPTION:** The current beneficiary identification code (BIC) specifies the basis of the beneficiary's

The original source for this variable is the State Medicare Modernization Act (MMA) files that states submit to CMS. Those files are considered the "gold standard" for identifying dual eligibles because the information in them is used to determine the level of Medicare Part D low-income subsidies. Dual eligibles are often divided into "full duals" and "partial duals" based on the level of Medicaid benefits they receive. CMS generally considers beneficiaries to be full duals if they have values of 02, 04, or 08, and to be partial duals if they have values of 01, 03, 05, or 06. Partial duals sometimes divided into the QMB-only population (01) and all other partial duals (03, 05, or 06). There are different ways to classify dually eligible beneficiaries. Additional information regarding various ways to identify dually enrolled populations, refer to a CCW Technical Guidance document entitled: "Options in Determining Dual Eligibles". **SHORT NAME: DUAL 11** 

LONG NAME: DUAL\_STUS\_CD\_11

TYPE: CHAR

LENGTH: 2

**SOURCE:** CMS Common Medicare Environment (CME)

**VALUES:** NA = Non-Medicaid

00 = Not enrolled in Medicare for the month

01 = Qualified Medicare Beneficiary (QMB)-only

02 = QMB and full Medicaid coverage, including prescription drugs

03 = Specified Low-Income Medicare Beneficiary (SLMB)-only

04 = SLMB and full Medicaid coverage, including prescription drugs

05 = Qualified Disabled Working Individual (QDWI)

06 = Qualifying individuals (QI)

08 = Other dual eligible (not QMB, SLMB, QWDI, or QI) with full Medicaid coverage, including prescription Drugs

09 = Other dual eligible, but without Medicaid coverage

99 = Unknown

#### **COMMENT:**

The original source for this variable is the State Medicare Modernization Act (MMA) files that states submit to CMS. Those files are considered the "gold standard" for identifying dual eligibles because the information in them is used to determine the level of Medicare Part D low-income subsidies. Dual eligibles are often divided into "full duals" and "partial duals" based on the level of Medicaid benefits they receive. CMS generally considers beneficiaries to be full duals if they have values of 02, 04, or 08, and to be partial duals if they have values of 01, 03, 05, or 06. Partial duals sometimes divided into the QMB-only population (01) and all other partial duals (03, 05, or 06). There are different ways to classify dually eligible beneficiaries. ## DUAL\_MO

LABEL: Months of Dual Eligibility

**DESCRIPTION:** This variable is the number of months during the year that the beneficiary was dually

eligible (i.e., he/she was also eligible for Medicaid benefits).

**SHORT NAME: DUAL MO** 

LONG NAME: DUAL\_ELGBL\_MONS

TYPE: NUM

**LENGTH:** 3

**SOURCE:** CMS Common Medicare Environment (CME) (derived)

**VALUES:** 0-12

**COMMENT:** CCW derived this variable by counting the number of months where the beneficiary had

dual eligibility (i.e., months where DUAL\_STUS\_CD\_XX equal to '01', '02', '03', '04', '05',

'06', '08', '09', or '99').

There are different ways to classify dually eligible beneficiaries - in terms of whether he/she is enrolled in full or partial benefits. Additional information regarding various ways to identify dually enrolled populations, refer to a CCW Technical Guidance

document entitled: "Options in Determining Dual Eligibles"

#### **EFIVEPCT**

LABEL: Enhanced Medicare 5% Sample Indicator

**DESCRIPTION:** This variable indicates whether the beneficiary was ever included in the CCW 5% sample

for any year (1999+).

**SHORT NAME: EFIVEPCT** 

**LONG NAME:** ENHANCED\_FIVE\_PERCENT\_FLAG

TYPE: **CHAR** 

LENGTH: 1

**SOURCE:** CCW (derived)

**VALUES:** Y = Yes, included in enhanced 5% sample

Null = Not included in enhanced 5% sample

**COMMENT:** This enhanced 5% sample is broader than the annual 5% sample (variable that was

> previously called FIVE\_PERCENT\_FLAG; currently called SAMPLE\_GROUP - when value ='01' or '04') because it includes all beneficiaries who were ever part of the 5% sample but had a HIC change that was not part of the sample. The "enhanced" indicator variable

allows for longitudinal study of the 5% sample (i.e., once in, always in).

CCW creates the 5% sample using standard CMS processes. The 5% random sample consists of people who had a Medicare beneficiary Health Insurance Claim number (HIC)

equal to the Claim Account Number (CAN) plus Beneficiary Identity Code (BIC)

(HIC=CAN+BIC) where the last two digits of the CAN are in the set {05, 20, 45, 70, 95}.

## **ENRL\_SRC**

**LABEL:** Enrollment Source

**DESCRIPTION:** This variable indicates the source of enrollment data.

**SHORT NAME:** ENRL\_SRC

LONG NAME: ENRL SRC

TYPE: CHAR

**LENGTH**: 3

**SOURCE:** CCW

**VALUES:** EDB = Enrollment Database

CME = Common Medicare Environment

**COMMENT:** The Centers for Medicare & Medicaid Services (CMS) has updated the Medicare

enrollment source data for the Master Beneficiary Summary File (MBSF). As of March 2017, the MBSF includes Medicare enrollment information from the CMS Common Medicare Environment (CME) rather than the CMS Common Medicare Environment (CME). Data from the two sources was nearly identical. The CME improves the

identification of Medicare Part B enrollment and also allows for more timely release of

the MBSF.

The universe of beneficiaries in the CME versus the EDB version of the MBSF are only  $\,$ 

slightly different.

**COMMENT:** This variable counts the number of months during the year that the beneficiary received

their Part A and Part B benefits through a managed care plan (i.e., a Medicare Advantage [MA] plan) instead of the traditional fee-for-service (FFS) program. Any month where the HMO indicator variable (HMOINDXX) was anything other than a 0 (not

## RTI\_RACE\_CD

LABEL: Research Triangle Institute (RTI) Race Code

**DESCRIPTION:** Beneficiary race code (modified using RTI algorithm). Enhanced race/ethnicity

designation based on first and last name algorithms.

SHORT NAME: RTI\_RACE\_CD

LONG NAME: RTI\_RACE\_CD

TYPE: CHAR

LENGTH: 1

**SOURCE:** CMS Common Medicare Environment (CME) (derived)

**VALUES:** 0 = Unknown

1 = Non-Hispanic White

2 = Black (Or African-American)

3 = Other

4 = Asian/Pacific Islander

5 = Hispanic

6 = American Indian / Alaska Native

**COMMENT:** This variable is created by taking the beneficiary race code that has historically been

used by the Social Security Administration (and is in turn used in CMS's enrollment data base) and applying an algorithm that identifies more beneficiaries as Hispanic or Asian.

This algorithm was developed by the Research Triangle Institute (RTI) and is thus often

referred to as the "RTI race code".

The algorithm classifies beneficiaries as Hispanic or Asian if their SSA race code equals 4 (Asian) or 5 (Hispanic), or if they have a first or last name that RTI determined was likely

Hispanic or Asian in origin.

The variable also incorporates CCW enhancements that reduce the number of

beneficiaries with missing information.

## SAMPLE\_GROUP

LABEL: Medicare Sample Group Indicator

**DESCRIPTION:** Medicare 1, 5, or 20% strict sample group indicator.

**SHORT NAME:** SAMPLE\_GROUP

LONG NAME: SAMPLE GROUP

TYPE: CHAR

LENGTH: 2

**SOURCE:** CCW (derived)

**VALUES:** 01, 04, 15, null/missing (not included in 20% sample for the year)

**COMMENT:** CCW creates the sample values using standard CMS processes to identify the random 1,

5, 15, and 20 percent samples of Medicare beneficiaries.

The sample groups are based on a random 20 percent sample that is split into three mutually exclusive groups of 1 percent, 4 percent, and 15 percent.

To use the 1 percent sample, specify that SAMPLE\_GRP equals "01".

To use the 5 percent sample, specify that SAMPLE\_GRP equals "01" or "04".

To use the 15 percent sample, specify that SAMPLE\_GRP equals "15".

To use the 20 percent sample, specify that SAMPLE\_GRP equals "01", "04", or "15".

Beneficiaries are assigned to sample groups each year based on the last two digits of their Medicare Claim Account Numbers (CANs). Since CANs can change over time (e.g., in the case of remarriage), new beneficiaries are becoming eligible for Medicare, and existing beneficiaries are dying, the sample is cross-sectional. There is no guarantee that the exact same beneficiaries are represented in the same sample group from one year to the next (i.e., this is the strict sampling).
